

# Senior Java Engineer

## m/w/d, Zürich

For our client in **Zürich**, we are looking for an **Senior Java Engineer**

You will join a team of engineers responsible for building processes and interfaces that connect our client's digital asset solutions with its core banking platform. Your work will enable seamless synchronization between digital assets and core banking operations.

### Your Responsibilities:

- \* Develop and implement new features and improvements by writing and reviewing high-quality, secure code with comprehensive test coverage
- \* Develop and maintain integrations between digital asset solutions and core banking systems across different business domains
- \* Drive the scalability and reliability of booking processes
- \* Design and maintain API-based features, including balance retrieval, account transfers, payments, trading and messaging
- \* Ensure seamless synchronization between digital asset solutions and core banking operations
- \* Continuously improve the quality and security of applications and identify and address technical debt
- \* Respond promptly to production incidents and collaborate with cross-functional teams to resolve issues and restore service continuity
- \* Contribute to the overall scalability, quality and reliability of the systems

### Your Profile:

- \* Several years of professional experience as a **Senior Java Engineer**
- \* Strong expertise in **Java 21+**
- \* Strong experience with **Quarkus or Spring**
- \* Solid experience with **RDBMS**, ideally **PostgreSQL**
- \* Hands-on experience with **Apache Kafka**
