

Manufacturing Biotechnology Manager

m/f/d, Wallis

This role supports **biopharmaceutical manufacturing operations**, with a strong focus on production performance, GMP compliance, technical troubleshooting, and continuous improvement. The position acts as a key technical interface between Manufacturing, MSAT, and cross-functional teams, helping resolve production issues, maintain equipment and facility readiness, and implement technical changes.

The ideal candidate brings **biotechnology/bioprocessing expertise, strong mammalian cell culture and GMP knowledge**, and combines technical problem-solving skills with leadership, communication, and a collaborative mindset. The role also contributes to **risk management, process standardization, innovation, and operational excellence** across the manufacturing plant.

Key Responsibilities

- * Support the execution of production campaigns within the manufacturing unit, contributing to the achievement of safety, quality, and delivery objectives while assisting management and operational teams in day-to-day activities.
- * Act as a key point of contact for production-related issues, supporting investigations, escalation processes, and resolution efforts in collaboration with Manufacturing, MSAT, and other cross-functional teams. Provide technical expertise in troubleshooting and problem-solving activities.
- * Assist in maintaining the technical readiness and availability of manufacturing suites and equipment by supporting compliance with safety, environmental, quality, and regulatory requirements.
- * Contribute to the review and implementation of technical change requests within the manufacturing unit, ensuring alignment with operational needs and established procedures.
- * Support innovation and continuous improvement projects aimed at enhancing manufacturing processes, operational efficiency, and overall plant performance.
- * Promote technical excellence and process standardization by supporting the implementation of best practices and harmonized manufacturing approaches across the production plant.

- * Participate in risk assessments, workplace inspections, and compliance activities, identifying improvement opportunities and supporting the implementation of corrective and preventive actions.

Qualifications

- * Broad biotechnology expertise and/or knowledge of biotechnical engineering.
- * Strong GMP knowledge.
- * Proficient in English.
- * Understanding of business and financial processes.
- * Strong background in mammalian cell culture.
- * Strong leadership skills.
- * Excellent communication skills, with the ability to collaborate effectively across all levels and functions of the organization.
- * Strong team-oriented mindset.
- * Structured, focused, and well-organized working style.
- * Open-minded and receptive to new ideas and suggestions.
- * Agile, highly motivated, and driven.
- * Solution-oriented with a proactive approach to problem-solving.
