

Senior Software Engineer (AI-Enabled Software Delivery)

m/f/d, Bern

For our client in the logistics industry in Bern, we are looking for a skilled and forward-thinking **Senior Software Engineer (AI-Enabled Software Delivery)**.

This position is ideal for someone with a solid engineering foundation and practical experience leveraging Generative AI in daily development workflows. You will play a key role in delivering high-quality software and guiding teams to effectively integrate AI-driven development practices in a pragmatic and outcome-oriented way.

Your Tasks:

- * Design, develop, maintain, and enhance modern software solutions in agile development environments
- * Apply Generative AI tools effectively throughout the software development lifecycle
- * Support teams in adopting AI-assisted development practices while maintaining high engineering standards
- * Ensure software quality, security, maintainability, reliability, and correctness across all deliverables
- * Participate in code reviews, testing activities, and continuous integration and deployment processes
- * Identify opportunities to improve engineering effectiveness and developer productivity
- * Analyze and optimize existing development workflows and software delivery processes
- * Collaborate closely with software engineers, architects, product owners, and other stakeholders
- * Contribute to the definition and implementation of software engineering best practices
- * Support the stable and efficient delivery of software solutions within modern DevOps environments
